

Yurii Zaika

AI / Python Engineer

Ten years of production engineering plus a personal track in Python and ML. Built a real-time speech pipeline: faster-whisper on CUDA, pyannote diarization, VAD and streaming — 55 modules, 15,500 lines of Python, with regression measurements of latency and RTF. Alongside it: data pipelines on SQLAlchemy and Playwright, and daily work with AI agents.

EXPERIENCE

2026-03 — present

AI / Python and Full Stack Developer, Freelance and personal projects, Dnipro · remote

- A real-time speech pipeline: faster-whisper on CUDA, pyannote diarization, VAD, WASAPI capture — 55 modules, 15,500 lines of Python.
- And a regression suite for it: RTF, latency under load, noise robustness, quality ceilings — decisions come from measurements, not impressions.
- A real-estate parser in Python: SQLAlchemy 2 and Alembic over PostgreSQL, Playwright and selectolax, a Typer CLI, pytest and ruff.
- A listings pipeline over six sources with geocoding, deduplication and catalog publishing through GitHub Actions.
- A legacy-code analyzer: Python parses .dfm and .pas files and diffs stored-procedure calls, Next.js renders the system map with annotations.
- Daily work with AI agents: MCP servers, custom subagents and hooks, and my own CDP browser inspector as agent tooling.

2016-06 — present

Lead Application Programmer, ATB-Market, Dnipro

- Since 2018 also build internal services on ASP.NET Core and Angular: access, audit, reporting, integrations — 33 of the network's systems carry my code.
- Own the client side of the network's trading system: 955 units, 828 forms, MS SQL, covering supply documents, pricing and fiscal invoices.
